

# GW Ross Hall Classroom 201

## Description:

This project for GWU consisted of the demolition of existing desktops, light fixtures, carpeting and chair railing followed by the installation of brand new carpeting, paint on ceiling and walls, chair railing, desktops, motorized shades and light fixtures with motion sensors. Additionally, the updated classroom is fully equipped with a new sprinkler system for safety. We love all of the special features of this classroom including the custom desktop furniture along with extensive recessed lighting.

## Details:

Location:	George Washington University
